DETAILED ACTION

1. Claims 1-11 are presented for examination.
2. Acknowledgement is made of a claim for foreign priority under 35 USC § 119(a)-(d). However, the certified copies of the priority documents Germany 198 11 841.4 have not been received.
3. It is noted that although the present application does contain line numbers in the specification and claims, the line numbers in the claims do not correspond to the preferred format. The preferred format is to number each line of every claim, with each claim beginning with line 1. For ease of reference by both the Examiner and Applicant all future correspondence should include the recommended line numbering.
4. Claims 6 and 9-11 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
 - a. The claim language in the following claims is not clearly understood:
 - i. as to claim 6, line 3, it is not clearly understood what is meant by “roviding” (i.e. providing?);
 - ii. as to claim 9, it is unclear what the abbreviation of “UPN” and “OSI” stand;

- iii. as to claim 10, the claim has the same deficiency as claim 9 as set forth in the paragraph above.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shaffer et al (US 6,185,290 B1).

7. As to claim 1, Shaffer et al. disclose the invention substantially as claimed, including a telecommunication system having a remote administration function (col. 2, lines 29-42), comprising:

a telecommunications apparatus (238, 240, 242, fig. 2) defining a terminal with properties of a terminal with administration authorization (col. 14, lines 64-67; col. 15, lines 1-16; col. 27, lines 15-29); and

a remote computer (207, 248, fig. 2) connected to said telecommunications apparatus, and a data stream to and from said terminal being diverted to said remote computer (col. 17, lines 61-67; col. 18, lines 1-9; col. 27, lines 30-48).

8. Shaffer et al. do not specifically disclose terminal is a virtual terminal. However, Shaffer et al. disclose that the terminal is defined as a standard on the network (col. 27, lines 15-29). It would have been obvious to one of ordinary skill in the art at the time the invention was made to include the virtual terminal to Shaffer et al. because it would provide for any terminal to communicate with any host computer.

9. As to claim 2, Shaffer et al. further disclose that said terminal with administration authorization is a telephone (col. 27, lines 50-61).

10. As to claims 3-5, Shaffer et al. disclose said telecommunication apparatus has a virtual unit and port (col. 34, lines 64-67; col. 35, lines 8-16).

11. As to claim 6, Shaffer et al. disclose said remote computer has a message interpreter and an emulator providing an interface and functionality of said terminal with administration authorization (col. 28, lines 1-5).

12. As to claim 7, Shaffer et al. disclose said telecommunications apparatus has a data interface and control traffic between said virtual port and said telecommunication apparatus is diverted to said data interface (214, fig. 2; col. 29, lines 45-67; col. 30, lines 1-9; col. 34, lines 64-67; col. 35, lines 8-16).

13. As to claim 8, Shaffer et al. disclose said data interface is selected from the group

consisting of a V.24 interface, an analog modem and an integrated service digital network card (col. 28, lines 6-13).

14. As to claims 9-11, Shaffer et al. further disclose said telecommunications apparatus having a call processing unit (fig. 3; col. 15, lines 17-28; col. 27, lines 30-48); said call processing unit has an application interface (col. 8, lines 26-37; col. 11, lines 2-15; col. 24, lines 31-34).

Conclusion

15. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Garson et al., patent 5,689,550, Sitbon et al., patent 5,568,487 disclose data transfer in the OSI Reference Model.

Rojas, patent 6,249,571 B1 discloses a system for integrated suite of system control and application software modules used to manage one or more telephone systems.
